--- 2 Sample MCQ Dermatology Questions and Their Explanations

Below are some representative questions with detailed explanations to illustrate common dermatology MCQs.

Question 1: A 45-year-old woman presents with multiple, well-demarcated, erythematous plaques with silvery scales on the elbows and knees. What is the most likely diagnosis?

- A) Psoriasis vulgaris
- B) Eczema
- C) Tinea corporis
- D) Lichen planus

Answer: A) Psoriasis vulgaris

Explanation: The presentation described is characteristic of psoriasis vulgaris, which typically manifests as erythematous plaques covered with silvery scales, commonly affecting extensor surfaces like elbows and knees. She reports burning pain. What is the most likely diagnosis? A) Herpes simplex virus infection B) Impetigo C) Aphthous ulcer D) Contact dermatitis Answer: A) Herpes simplex virus infection Explanation: The presentation of grouped vesicles on erythema, especially involving the lips and oral mucosa, is characteristic of herpes labialis caused by HSV. The burning sensation further supports this. Impetigo typically presents as honey-colored crusted lesions, aphthous ulcers are painful but ulcerative, and contact dermatitis is usually eczematous rather than vesicular. --- Question 2: Which of the following is the most common cause of psoriasis? A) Bacterial infection B) Genetic predisposition C) Fungal overgrowth D) Autoimmune response Answer: D) Autoimmune response Explanation: Psoriasis is primarily an autoimmune disorder characterized by hyperproliferation of keratinocytes driven by immune dysregulation.
